Subject : Compliance Reminder, CAT II/III Auto Land Data Submission

As per the guidelines from PCAA, all operators are required to adhere to the regulations regarding CATII/III Auto Land data submission.

As outlined in OM-A section 5.1.5 regarding Auto landing Reports, it is mandatory for flight crew to periodically assess the quality of Cat II/III equipment in compliance with CAA requirements. To ensure continued satisfactory operations, flight crew must complete an auto land coupled ILS approach to touch down at least once every 45 days in an aircraft to maintain recency.

To facilitate this process and ensure compliance, **all crew members are advised to update their recency by clicking CAT II/III in the digital crew app and also mention it in the debrief that the Autoland was successfully executed.**

This step will help in monitoring and recording each crew member's recency, which will be submitted to PCAA as per regulations.

Your cooperation in this matter will be highly appreciated.
